ANNEXURE A
PROJECT BRIEF

Azizi Milan

6468096- Zone 6- Plot 04

March, Revision 00

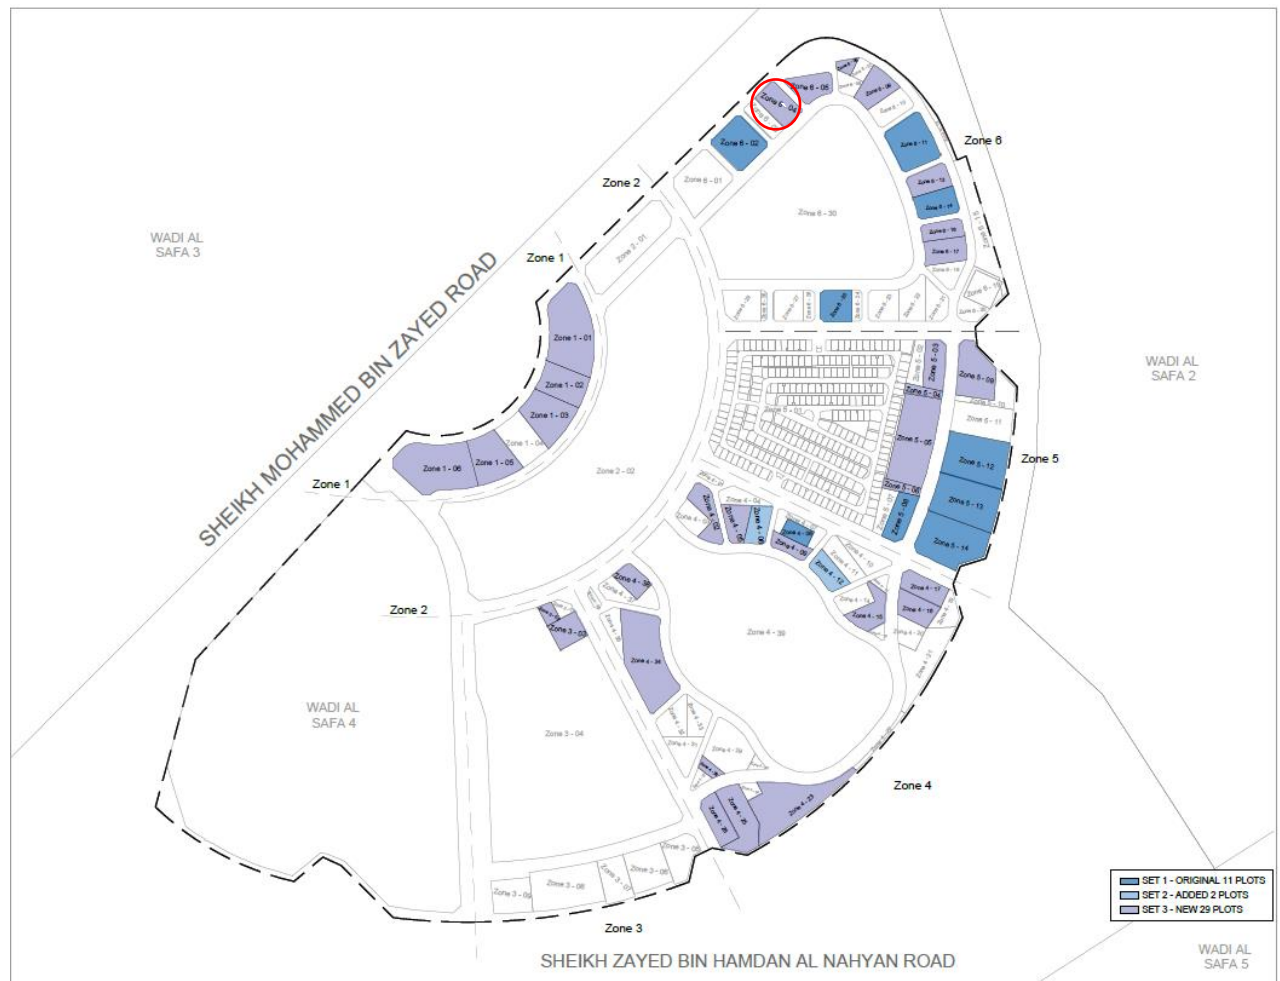

CITY OF ARABIA/ AZIZI MILAN

Azizi Developments' strategy aims to utilize the plots to create a highly desirable upper end yet diverse community consisting of residential and commercial buildings at CITY OF ARABIA (Azizi Milan). Accordingly, Azizi Developments would like to appoint Design consultants for Concept design services for City of Arabia.

To generate attractive USPs (unique selling propositions) and mitigate the landlocked location, Azizi Developments will engage specialists

Our direction for the Concept Design of these plots will be a modern-contemporary style design, inspired by a cosmopolitan lifestyle, while we aim to introduce a more innovative set of high-end Highrise Buildings.

The purpose of this RFP is to procure a design for Plot no. **6468096-Z6-04**, that will be highlighted in subsequent sections, plus to gather technical and commercial proposals for concept designs of the various buildings which are listed in subsequent sections.

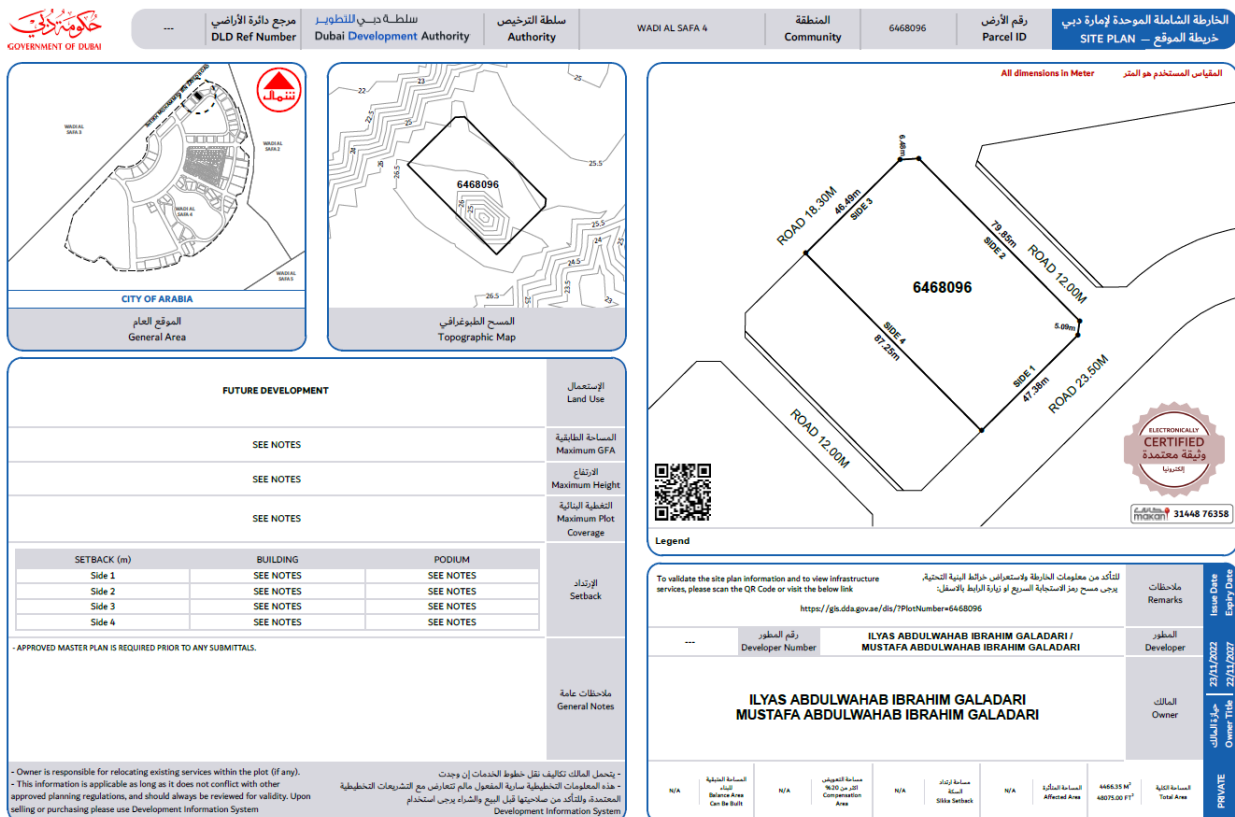

PROJECT BRIEF:

- All the plots shall be designed as complete Residential.
- Ground Floor to have Retail allocation, maximum possible
- Architectural Concepts to be made ready as per proposed program.
- It was confirmed that all necessary modifications to land use and TIS will be done and settled at the SPA so no hurdles will be faced during development approvals.
- Unit sizes are as follows:
 - Studio: 320 sq.ft,
 - 1Bed: 550 to 650 sq.ft,
 - 2Bed: 1100 sq.ft,
 - 3Bed: 1400 sq.ft,
- SA on GFA should be more than 100%.
- CITY OF ARABIA Project to have the below unit mix:
 - Studio: 70 %
 - 1Bed: 25 %
 - 2Bed: 3 %
 - 3Bed: 2 %

Design Services outlined in the RFP are required for the following Plots.

Figure 1– Location Map

a. Plot no - 6468096-Z6-04

All the above plots are designated for high-density developments, featuring a diverse mix of apartment types. The building heights range up to **G+5P+45** stories. Convenience retail, restaurants, cafes, and other essential facilities should be incorporated on the ground floor to cater to the daily needs of the residents.

Note: Amalgamation with adjacent plots may be possible, subject to detailed assessment and approval. (Refer to Annexure C- Plot Information).

1.1 Buildings' Components

The buildings will include the following components:

- a. Residential apartments on all upper floors, including studio, one bedroom, two bedrooms and three bedrooms. The unit mix percentage, size and the numbers as specified in the Section 2.0, Project Program.
- b. Retail units including F&B, Café and other units in ground floor.
- c. Associated amenities like gymnasium, sauna, jacuzzi, main swimming pool, kid's swimming pool, indoor kid's play area, yoga & aerobic area, outdoor kids play area, bar counter, barbeque area, fountains etc. The amenities ratio specified in the appendix to be followed.
- d. Parking in the podium. Quantity and the area as per authority requirements.

The building's GFA calculations is as defined by DDA Regulations.

1.2 Architectural Style and Theme

Considering the Client Vision, the architectural style of the apartments will be an eclectic mix of modern contemporary design, illustrating the highest aspirational trends of a luxurious lifestyle.

The architectural style should create a distinguished, contemporary design reflecting the high-end aspirational brand identity and exceeding the market norms.

Large Balconies (up to 20% of the total sellable area of the unit) are encouraged, with focus on residents' privacy and ultimate comfort and their rational proportion to their unit sizes.

The choice of constructive systems and materials should reflect the aspirational high-end quality of the brand, yet durable, easily sourced, installed, and maintained.

Use of architectural lighting is important to express key façade features and contribute to creating a comfortable high-end environment for the residents. Unnecessary complex geometries should be avoided, to pre-empt technical complications, negatively impacting construction, and maintenance.

Designs should generally be focused on value creation, comfortable living high-end environment, a luxurious lifestyle, yet considering efficiency, durability, and constructability.

Additionally, the following points shall be remembered while designing.

- a. Plans of the apartment buildings shall be arranged in order to allow for maximum flexibility and honouring an efficient structural grid. Any GFA distribution which would be considered inefficient should be avoided. The planning shall be flexible enough to accommodate a sudden change in the requirements like unit mix ratio, unit sizes, unit numbers and the other quantities that might arise due to the market conditions and sale response, within shorter period.
- b. Design of the apartment buildings should also allow for varied balcony designs and push and pull elements of the façade to create a richness and diversity of material finishes and massing elements.
- c. The Sellable area to GFA should have a target efficiency not less than 100% including the balconies.
- d. It is the Client's preference to work on a regular structural grid, which could efficiently fit both residential units on the upper floor, retail units on the ground floor and the parking in the

basement floors. Cantilevered balconies shall be kept within 2m for structural and cost efficiency.

2 Project Programme

1.				
Plot No.	Plot Area ft ²	GFA (m ²)	GFA (ft ²)	Remarks
6468096-Z6-04	48,075	21,604.61	232,552	
Note				

25% tolerance in GFA could be considered, so GFA swapping is possible between plots. And fee shall be prorated /adjusted if there are any variance during the contract execution.

2. Design Reference		
Unit Mix as per the client's Brief		
Unit	Unit Mix	Area(ft2)
Studio	70%	320
1 Bedroom	25%	550 to 650
2 Bedroom	3%	1100
3 Bedroom	2%	1400

2.1. Units shall be a combination of these modules, facilitating Sales to combine when needed.

S. No.	Retail unit	Abbreviation	Remarks
1	Restaurant (Full cooking service)	R	Minimum 2
2	Café (Full cooking service)	C	Minimum 2
3	Shops (No cooking service)	S	As needed

3 Project Considerations

1.0 Project Efficiency Targets

1. Avoid internal corridors.
2. The preferred location for the Restaurants and Cafes is at Ground level. Each plot development shall be unique and have a USP defined.
3. GFA achievement is critical. We have to achieve 100% of GFA
4. Balcony to be 20% of the total sellable area of the unit, and limited to not more than 25%, unless justified for elevation reasons, and agreed to with Client.
5. Sellable area Minimum 100% of total GFA, sellable area above 100% is preferred.
6. Basement car park minimum efficiency should achieve: 37.5 m2 per car.
7. Parking options to be considered: up to 5 levels above the Ground
8. Terraces: For apartment with terraces (at podium roof), terrace area can be 100% to the unit size.
9. Common terraces are discouraged.
10. This Unit Mix combination is to be worked out with 3 Basements, Ground and 5 podium levels max or the nearest unit mix based on parking achievable within the 3 Bs and 5 Ps of parking, keeping studios and 1 bed as MAJOR SHARE.
11. Retail is 6M in height and with maximum retail spread on the ground as much as possible, excluding service areas needed on the Ground level per plot.

1.1 Amenities

Allow 3% of GFA for Amenities

- Gym
- Steam
- Sauna
- Multipurpose hall
- Cinema
- Kids play area.
- Pool and its allied facilities are minimum.
- Any other facility that fits within the area allowance
